## **PROJECT DESCRIPTION:**

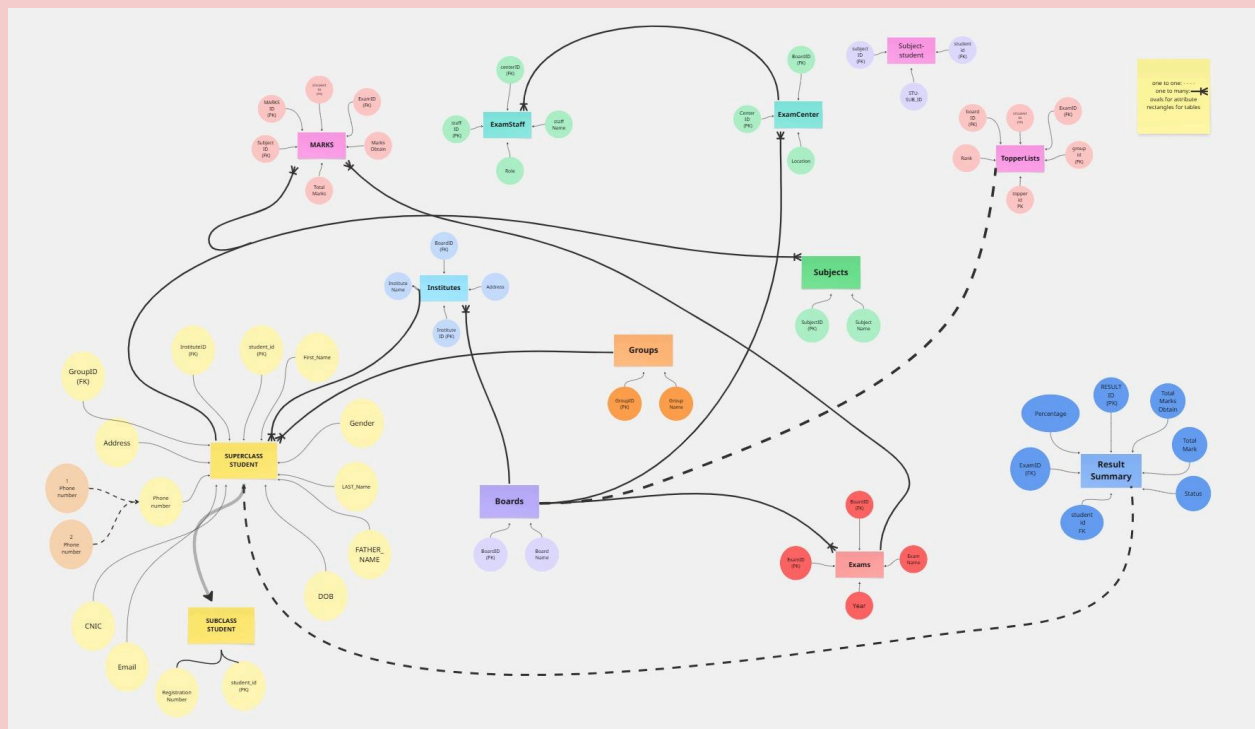

The Examination Result Management System is a structured database project designed to manage the student examination data across all Punjab Intermediate Boards.

This Database maintain the record of students marks of each exam ,its group of study ,its institute and in which board he/she give their exam ,and at the end with the help of this data we will generate final result sheet of student

It maintains detailed records of students, institutes, subjects, exams, exam centers, marks, results, and topper lists of each board.

The system is normalized up to 3NF form to ensure data consistency and avoid redundancy

## Getting student with respect to group:

The screenshot shows a SQL query editor with the following query:

```
select e.Year,e.BoardID,rs.ResultID, rs.StudentID, rs.ExamID, rs.TotalMarks, rs.ObtainedMarks, rs.Percen  
from exam e join resultsummary rs on e.ExamID=rs.ExamID ORDER BY e.BoardID;  
select g.Group_Name , s.first_name,s.father_name,s.DOB,s.cnic from student s join gro_up g on s.groupid  
order by g.Group_Name;
```

The result grid displays the following data:

## Counting student in each group

The screenshot shows a SQL query in the SQL Server Enterprise Manager. The query is as follows:

```
272 order by g.Group_Name;  
273 • select g.Group_Name ,count(s.student_id) from student s join gro_up g on s.groupid = g.Group_id  
274 GROUP BY g.Group_Name;
```

The query results are displayed in a grid:

Group_Name	count(s.student_id)
Science	21
Arts	4

The output pane shows the following messages:

- 12 12:48:42 select g.Group\_Name , s.first\_name,s.father\_name,s.DOB,s.cnic from student s join... 25 row(s) returned
